Tensorflow vs pytorch

- ▶ Pytorch is by facebook
- ▶ Tesorflow is by google
- ▶ The choice between PyTorch and TensorFlow is no longer about which is "better"—both are mature, high-performance frameworks.

Tensorflow vs pytorch

Topic	<u>PyTorch</u>	<u>TensorFlow</u>
Coding Style	Feels like normal Python. Easy to write.	More structured. Keras makes it simple.
How It Runs	Runs line-by-line. Easy to debug.	Can run line-by-line or as a fast graph.
Who Uses It	Researchers, universities.	Companies, production teams.
Deployment	Okay for deployment.	Very strong (mobile, web, servers).
Learning Curve	Very easy to start.	Easy with Keras, more tools overall.

Tensorflow vs pytorch

- Use PyTorch when you want simple coding. Use TensorFlow when you want easy deployment.

Homework

- Use the Iris dataset and build a simple classifier in both frameworks. Train, evaluate, and compare the results.
