NLP definition and example

1. NLP is basically how we teach computers to understand the way we talk and write
2. Here are a few **real-world, simple examples** of NLP in action:
 3. 1. Chatbots and Virtual Assistants: When you ask Siri or Alexa a question, they're using NLP to understand what you're saying and respond in a way that makes sense.
 4. 2. Language Translation: Tools like Google Translate use NLP to translate text from one language to another.
 5. 3. Spam Filters: Your email spam filter uses NLP to figure out which messages are junk and which ones are important.

Hugging face

- Hugging Face is basically a big online library for NLP models and tools, making it super easy for you to grab and use them!

<https://huggingface.co/>

Example:

We have a sentence, and we want to figure out if it has a positive or negative sentiment. In other words, we're using a model to understand the emotional tone of the text. That's the core problem: taking a piece of text and determining if it's positive, negative, or maybe neutral.

Assignment

- Use the Hugging Face model `tabularisai/multilingual-sentiment-analysis` to analyze the sentiment of the 5 English sentences provided below.
- Sentences to analyze:
 - See the next slide

Assignment

1)

Context: The product arrived quickly but the quality was disappointing.

Query: What is the sentiment of this review?

2)

Context: I really enjoyed this movie; the acting was excellent.

Query: How positive is the user's opinion about the movie?

3)

Context: The restaurant was crowded and the service felt slow.

Query: What does the user feel about their experience at the restaurant?

4)

Context: This laptop is fast, lightweight, and perfect for travel.

Query: How would you describe the sentiment toward this laptop?

5)

Context: The customer support team didn't solve my issue and seemed unhelpful.

Query: What is the sentiment expressed about the customer support?
